

# *SUPERFREEZER*

*Super-low temperature refrigerated container*

**Container Refrigeration**

- *Maintains cargo at -60°C in any ambient condition*
- *Advanced MP-3000 Thermo King controller*
- *Dual compressor cascade technology*

## SuperFreezer

*Designed to transport and maintain safely and conveniently all cargo which is best sustained at ultra-low temperatures, Thermo King SuperFreezer refrigerated containers allow to preserve first day product freshness and value through long-haul sea transportation.*

Super-frozen cargo can be loaded directly from cold storage into pre-cooled, -60 degree C SuperFreezer containers directly from cold stores and transported or stored for long periods of time. The result is minimal temperature fluctuation as cargo is maintained at optimal temperatures from the very beginning of the cold chain.

Ideal for high value cargo like sashimi-grade tuna, swordfish or sea urchins, the SuperFreezer's extreme-low holding temperatures preserve the 'just caught' freshness, taste and texture, while eliminating undesired odours.

Thermo King has long agreed with the experts ... colder is better. SuperFreezer container refrigeration delivers unmatched low-temperature performance to maintain and deliver products of the highest quality, extending shelf life for increased profitability.

### Features include:

- MP-3000 controller
- Dual refrigeration circuit system consisting of a combined scroll + reciprocating compressor
- Safety vacuum valve

SuperFreezer units can be powered by SG-3000 series Thermo King generator sets

### Worldwide Service Organisation

Thermo King backs its equipment and customers with a highly trained, worldwide service organisation. This assures you the support of factory authorised service support and shop facilities, a stock of factory parts, and factory trained mechanics.
